

General Description

Levolux Walk On Brise Soleil provides all the advantages of efficient sunscreening coupled with easy access.

The system comprises of a series of 'J' tread elements, with a non-slip top section, that are spaced to provide shading and also to create a platform (This spacing can be determined for specific geographical requirements).

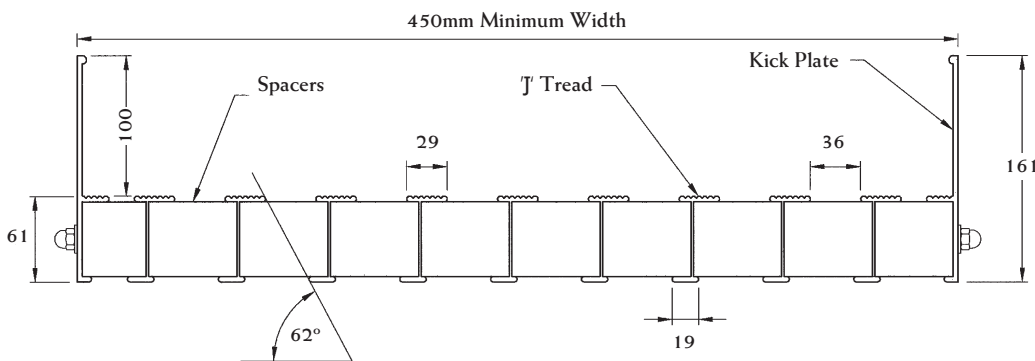

As a result the Walk On Brise Soleil prevents the sun's rays from entering a building whilst also providing a rigid, safe working platform for maintenance and window cleaning.

The virtually maintenance free Walk On Brise Soleil is manufactured from lightweight extruded aluminium components and can be supplied mill finished, anodised or polyester powder coated.

The system can be cantilevered from the face of the building or supported on structures by others.

The system can be used on both new build, refurbishment projects or added to an existing structures.

A fall arrest system or handrail should be considered in the design.

Specification

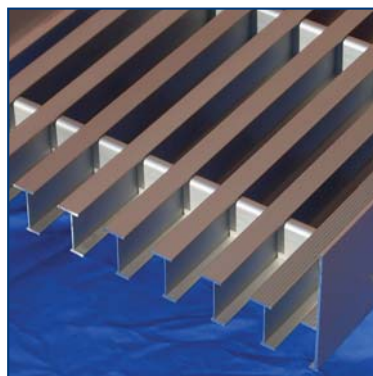

Product - Levolux Walk On Brise Soleil

Fixed external Walk On Brise Soleil system to be Levolux 910 Matrix manufactured from extruded aluminium components to BS1474. Factory assembled panels with 1.910.0100 J treads spaced at 65mm pitch over projection, to suit 62 degree sun cut off angle. Panels fabricated with Kick Plate side supports and spacer with stud at maximum 1500mm centres.

Finish - Mill finish / natural anodised / polyester powder coated

NB - this maintenance system is designed to support a 1kN point load at 3000mm centres with support arms spaced at 3000mm (equivalent to use by only one operative for maintenance purposes only). Levolux recommend that the system be used in conjunction with a fall arrest system such as a latchway safety cable.

In line with the policy of continuous product development Levolux reserves the right to alter specifications without prior notice.
